Iron Bacteria Test

Iron bacteria can produce a sticky slime in the water, cause an unpleasant taste and smell like sewage or rotten vegetation; however iron bacteria poses no health risk. Test strips are not needed to detect its presence.

1 Fill a clear glass with cold water. Allow any sediment to settle to the bottom.

If the sediment has a feathery appearance, iron bacteria is present.
If the sediment is rusty powder, iron bacteria is not present.

WARNING! This set contains chemicals that may be harmful if misused. Read cautions on individual containers carefully. Not to be used by children except under adult supervision.
